Samsung Health

➤ **About My App:**

This project is a Samsung Health inspired mobile application developed using React Native on the Expo Snack platform. The application replicates the modern UI/UX design of the original Samsung Health application while implementing multiple interactive and functional health tracking features such as step counting, hydration monitoring, calorie tracking, sleep monitoring, workout timer, achievements system, dark/light mode, user profile management, and customizable goals. The main objective of this project was to create a fully functional and responsive health tracking application with a professional mobile application interface and smooth user experience.

➤ **App Features**

❖ **Home Screen:**

- Step counter
- Water tracking
- Sleep tracking
- Calories tracking
- Progress bars

❖ **Fitness Screen:**

- Walking mode
- Running mode
- Cycling mode
- Workout timer
- Daily reports
- Achievements

❖ **Settings Screen:**

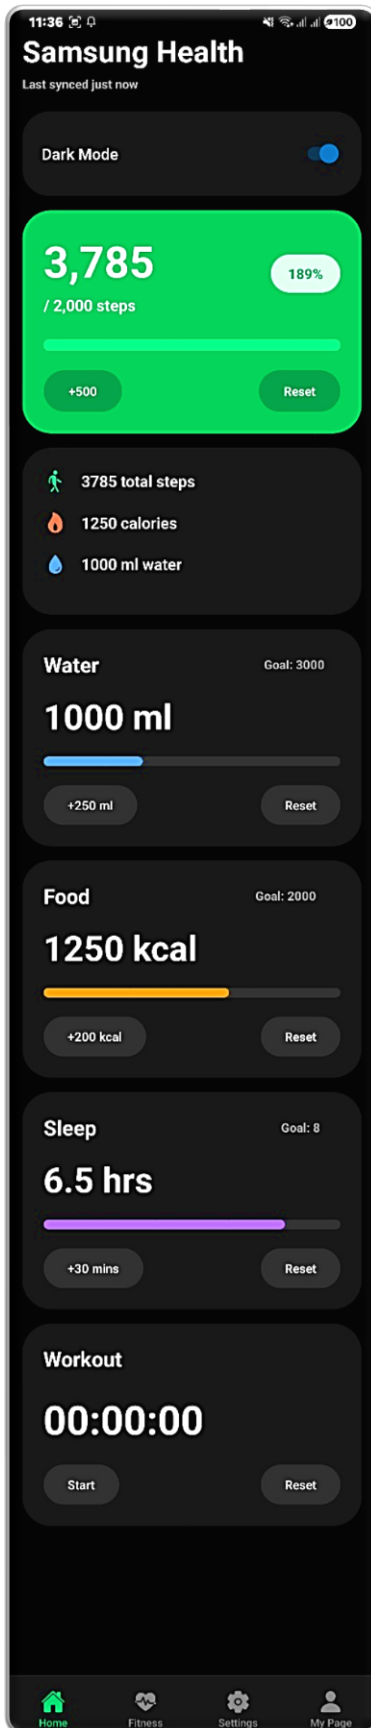

- Goal customization
- Dark mode toggle
- Data reset system

❖ **My Page Screen:**

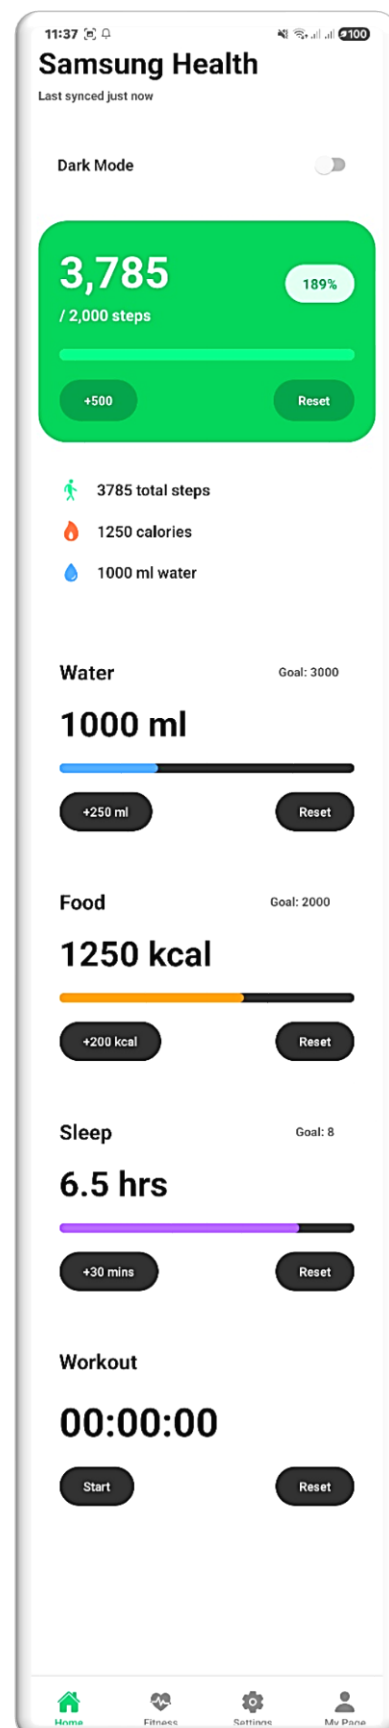

- User profile
- XP progress
- Weekly report
- Personal statistics
- Achievements section

➤ **Challenges Faced:**

During development, several technical challenges were faced, especially related to ScrollView performance and timer synchronization in React Native. Initially, the workout timer was implemented globally inside the main App component, which caused unnecessary re-rendering of screens and automatic scroll jumping issues. This issue was resolved by optimizing the timer architecture and isolating timer logic properly to improve rendering performance and application stability.

Thanks !
